

Roll it Snake Toy

a g rao

Roll It toy Snake was developed on our own initiative with view to manufacture in late Seventies! The parts could be turned in wood or blow moulded HDP. The links were to be made of injection moulding in PP. It was a simple pull toy with many possibilities for play.

The toy was conceived to be played in many ways with a role.. for elders to participate.

Stories could be built around by elders for children. Different combinations gave scope for child's imagination.
